

EXERCISE – 11

Question

Execute and display the results for the following Nmap Timing and Performance commands in Kali Linux Operating System:

- i) Aggressive speed scan
- ii) Insane speed scan

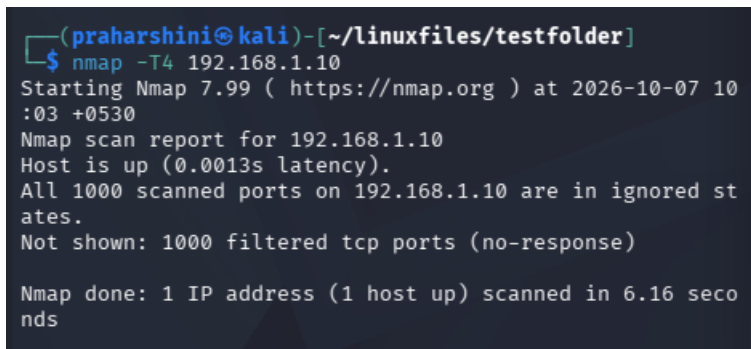

Aim

To execute and display the results of aggressive and insane Nmap timing scans in Kali Linux.

Use 192.168.1.10 only if it is your authorized lab target, as in your previous practical.

1. AGGRESSIVE SPEED SCAN: COMMAND

```
nmap -T4 192.168.1.10
```

```
(praharshini@kali)~[/linuxfiles/testfolder]
$ nmap -T4 192.168.1.10
Starting Nmap 7.99 ( https://nmap.org ) at 2026-10-07 10:03 +0530
Nmap scan report for 192.168.1.10
Host is up (0.0013s latency).
All 1000 scanned ports on 192.168.1.10 are in ignored states.
Not shown: 1000 filtered tcp ports (no-response)

Nmap done: 1 IP address (1 host up) scanned in 6.16 seconds
```

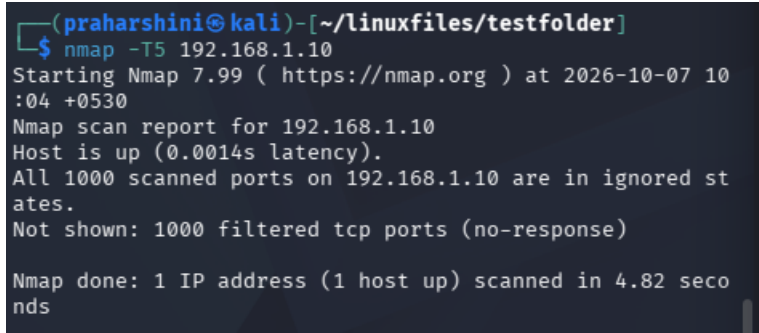

Use

The -T4 option performs an **aggressive/faster scan** compared with the normal timing template.

2. INSANE SPEED SCAN

Command

`nmap -T5 192.168.1.10`

A terminal window screenshot from a Kali Linux system. The prompt shows the user is 'praharshini' at 'kali' in the directory '~/linuxfiles/testfolder'. The command 'nmap -T5 192.168.1.10' has been entered. The output shows the Nmap version (7.99), the start time (2026-10-07 10:04 +0530), and a scan report for 192.168.1.10. It states the host is up with a latency of 0.0014s, and all 1000 scanned ports are in ignored states. It also mentions that 1000 filtered TCP ports were not shown due to no response. The scan completed in 4.82 seconds for 1 IP address.

```
(praharshini@kali)-[~/linuxfiles/testfolder]
$ nmap -T5 192.168.1.10
Starting Nmap 7.99 ( https://nmap.org ) at 2026-10-07 10:04 +0530
Nmap scan report for 192.168.1.10
Host is up (0.0014s latency).
All 1000 scanned ports on 192.168.1.10 are in ignored states.
Not shown: 1000 filtered tcp ports (no-response)

Nmap done: 1 IP address (1 host up) scanned in 4.82 seconds
```

Use

The -T5 option performs an **insane/very fast scan**, using more aggressive timing and potentially increasing network load.

Result

Thus, the aggressive speed (-T4) and insane speed (-T5) Nmap timing and performance commands were successfully executed in Kali Linux and the results were displayed.
