EXPERIMENT 25: USING SHELL PROGRAMMING

AIM

To write and execute shell programs in Kali Linux to:

1. Read a number and find its square.
2. Find the biggest of three numbers.

i) READ A NUMBER AND FIND ITS SQUARE

ALGORITHM

1. Start the program.
2. Read a number from the user.
3. Multiply the number by itself.
4. Store the result in a variable.
5. Display the square of the number.
6. Stop the program.

COMMANDS

nano square.sh

PROGRAM

#!/bin/bash

echo "Enter a number:"

read n

square=$((n*n))

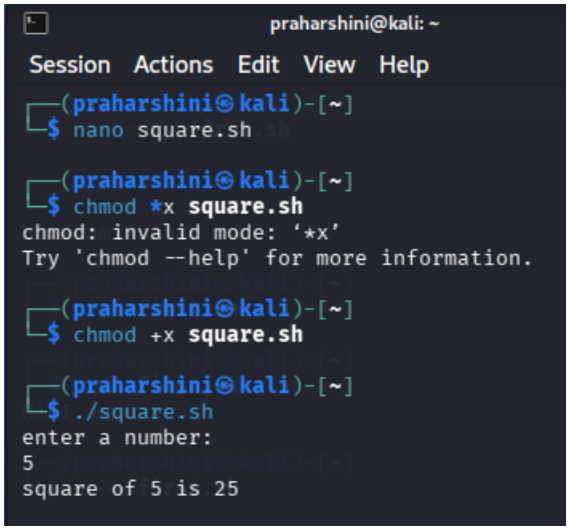

echo "Square of $n is $square"

Save the file using Ctrl + O, Enter and Ctrl + X.

Execute the following commands:

chmod +x square.sh

./square.sh

RESULT

Enter a number:

5

Square of 5 is 25

Thus, the shell program to find the square of a given number was successfully executed in Kali Linux.

---

ii) FIND THE BIGGEST OF THREE NUMBERS

ALGORITHM

1. Start the program.
2. Read three numbers from the user.
3. Compare the first number with the second and third numbers.
4. If the first number is greatest, display it.
5. Otherwise, compare the second number with the first and third numbers.
6. If the second number is greatest, display it.
7. Otherwise, display the third number.
8. Stop the program.

COMMANDS

nano biggest.sh

PROGRAM

```
#!/bin/bash
echo "Enter first number:"
read a

echo "Enter second number:"
read b

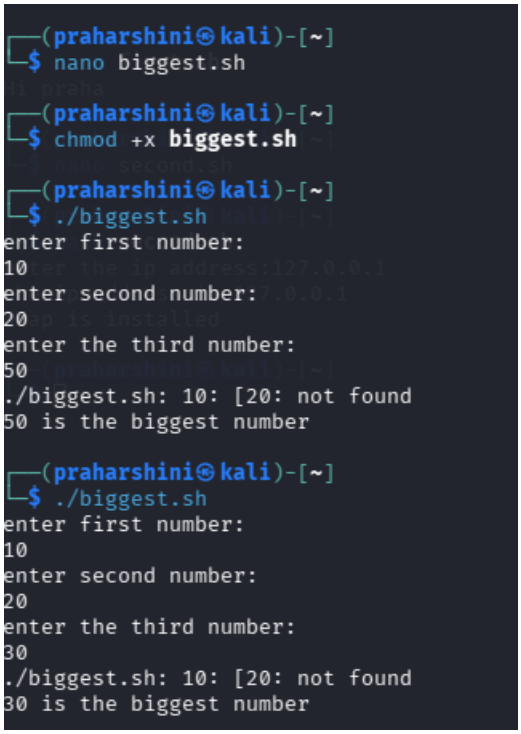

echo "Enter third number:"
read c

if [ $a -ge $b ] && [ $a -ge $c ]
then
   echo "$a is the biggest number"
elif [ $b -ge $a ] && [ $b -ge $c ]
then
   echo "$b is the biggest number"
else
   echo "$c is the biggest number"
fi
```

Save the file using Ctrl + O, Enter and Ctrl + X.

Execute the following commands:

```
chmod +x biggest.sh
./biggest.sh
```

RESULT

Enter first number:

10

Enter second number:

25

Enter third number:

15

25 is the biggest number

Thus, the shell program to find the biggest of three numbers was successfully executed in Kali Linux.
